

FLOWTRACK

Seed Investment Memorandum

An AI-powered workforce productivity & time-intelligence platform — already built, live, and capital-efficient. Raising to scale go-to-market.

Raising \$10,000 (Seed)

Product Live

~82% Gross Margin

Confidential • July 2026 • Prepared for prospective investors

Executive Summary

FlowTrack helps teams track time, monitor productivity, and get paid — with automated screenshots/activity, payroll & invoicing, a client portal with verifiable "Proof-of-Work", and AI (standups, insights, forecasting) plus Slack/Jira/GitHub integrations.

THE ASK

\$10K

Kickstart round

GROSS MARGIN

~82%

\$3.30 per user

BREAK-EVEN

~355

paying users (Phase 1)

YR-3 ARR (TARGET)

~\$432K

at 9,000 seats

*"The product is finished and running. Unlike most seed-stage startups, we are not asking for capital to build — we are asking to **grow**. Nearly every dollar goes to customer acquisition, not R&D."*

WHY THIS IS A STRONG BET

- **Product risk removed:** full platform is built and live (time tracking, monitoring, payroll, invoicing, AI, integrations).
- **Extremely lean cost base:** hosting is only ~\$175/month at launch; the software is done.
- **Attractive unit economics:** ~\$4 net revenue per user, ~\$3.30 gross profit (82% margin), LTV ≈ \$82.
- **Low break-even:** profitable at just ~355 paying users — reachable within the first year.
- **Large market:** global time-tracking & workforce-analytics is a \$5B+ and growing category.

1. The Problem

Distributed and hybrid teams struggle to answer three simple questions — and stitch together 4–5 tools to try.

- Where did the time go?** Manual timesheets are inaccurate; managers lack real visibility into remote work.
- Is the work real & billable?** Agencies and outsourcing firms can't easily prove work to clients, causing payment disputes.
- Too many disconnected tools.** Time tracking, monitoring, payroll, invoicing and reporting live in separate products, wasting money and admin hours.

2. The Solution — FlowTrack

One platform that turns tracked time into payroll, invoices, and provable results — enhanced with AI. All of the following is **already built and live**:

CORE

- Time tracking + desktop app (Windows & macOS)
- Screenshots & activity monitoring (with advanced mode)
- Projects, tasks & per-project team assignment
- Payroll runs & invoicing

DIFFERENTIATORS

- Client portal + verifiable "Proof-of-Work" certificates
- AI: auto-standups, insights, forecasting, "Ask FlowTrack"
- Integrations: Slack, Jira, GitHub, Calendar
- Role-based access, plan gating & Stripe billing

Status: Not a prototype. The platform is production-ready with billing, permissions, integrations and a developer API already shipped.

3. Market Opportunity

LAYER	DEFINITION	SIZE
TAM	Global time tracking & workforce analytics	\$5B+
SAM	SMB agencies, dev shops, remote/outsourcing teams	~\$1.2B
SOM (3 yr)	Initial focus: South-Asia outsourcing + global remote SMBs	~\$20M

Tailwinds: permanent shift to remote/hybrid work, growth of the outsourcing economy, and rising demand for accountable, provable billing.

4. Business Model & Pricing

Simple per-seat SaaS with a freemium funnel and a 14-day trial on all paid tiers.

PLAN	PRICE / USER / MO	SEAT CAP	BEST FOR
Free	\$0	1	Solo trial
Starter	\$2.49	5	Small teams
Professional ★	\$3.99	25	Growing teams
Enterprise	\$5.99	Unlimited	Larger orgs

5. Unit Economics — Capital Efficiency

Because the product is built and infrastructure is cheap, margins are strong from the first customers.

NET ARPU / USER \$4.00 blended / month	COST / USER \$0.70 Stripe + infra	GROSS PROFIT / USER \$3.30 ~82% margin	LTV / USER ~\$82 ~25-mo lifetime
---	--	---	---

INFRASTRUCTURE COST STAYS TINY VS. REVENUE

STAGE	USERS	INFRA / MO	REVENUE / MO	INFRA AS % OF REVENUE
Phase 1	1,500	~\$175	\$6,000	~3%
Phase 2	4,000	~\$320	\$16,000	~2%
Scale	10,000	~\$370	\$40,000	~1%

Key insight: Only ~355 paying users are needed to cover all costs in Phase 1. Every user beyond that is ~82% profit.

6. Financial Projections (3 Years)

Conservative per-seat growth driven by funded marketing. Revenue shown as annual recurring revenue (ARR) at year end.

Figures are directional and rounded; actuals depend on conversion, churn and marketing efficiency. The model is intentionally conservative and reaches profitability early due to the low cost base.

Capital-efficient path: The business can reach cash-flow break-even within the first year at ~355 paying users, then compound — the raise accelerates growth rather than funding survival.

7. The Ask — \$10,000 Kickstart

A minimal, accessible raise — enough to launch marketing and cover infrastructure until early revenue sustains the business. Because the product is already built, a small cheque goes a long way.

Marketing 60%		Infra 20%	Ops/Buffer 20%
■ Marketing & growth — \$6,000		■ Infrastructure & tools — \$2,000	■ Operations, legal & buffer — \$2,000
USE OF FUNDS		ALLOCATION	AMOUNT
Marketing & growth (ads, content, SEO, referrals)		60%	\$6,000
Infrastructure & tools (AWS, S3, email, monitoring)		20%	\$2,000
Operations, legal & buffer		20%	\$2,000
Total raise		100%	\$10,000

MILESTONES THIS UNLOCKS (18–24 MONTHS)

MILESTONE	TARGET
Reach cash-flow break-even	~355 paying users
Phase 1 server full & profitable	1,500 users
Scale infrastructure (Phase 2)	4,000 users
Annual recurring revenue	\$190K+ ARR

8. Competitive Edge

- **Lower price** than Hubstaff / Time Doctor, with more built in.
- **AI-native** (standups, insights, forecasting) out of the box.
- **All-in-one**: tracking + payroll + invoicing + portal.
- **Proof-of-Work** certificates — unique trust layer for agencies.

9. Roadmap

HORIZON	FOCUS
0–6 months	Launch marketing engine, onboarding & activation improvements, first paying cohorts.
6–12 months	Reach break-even (~355 users), fill Phase 1 server (1,500), expand integrations marketplace.
12–24 months	Scale to 4,000+ users, Enterprise/SSO push, mobile companion, partner & reseller channels.

10. Team

A lean, technical team that has already shipped a complete, production-grade platform — proof of strong execution and capital efficiency.

ROLE	RESPONSIBILITY
[Founder / CEO]	Product vision, strategy, fundraising
[Technical Lead]	Platform, infrastructure & roadmap delivery
[Growth / Marketing]	Acquisition, content & partnerships (to be scaled with this raise)

Replace bracketed fields with names/bios before sending to investors.

11. Why Invest Now

- **De-risked:** product is built, live and billing — capital funds growth, not development.
- **Efficient:** ~82% gross margins and a ~\$175/month cost base to launch.
- **Early break-even:** profitable at ~355 paying users.
- **Scalable:** infrastructure remains 1–3% of revenue at every stage.

A rare seed opportunity: a finished, revenue-ready SaaS with strong margins — raising modestly to turn a working product into a growing business.
